Iteration #1

- Create a phrases array and fill it with some of your favourites phrases.

```
var phrases = [
    'I like pie.',
    'Add some of your own phrases here.',
    'Make sure to follow all but the last phrase with a comma.'
];
```

- Show one of the phrases on the html page.
- When you refresh the page, the phrase should change*

Iteration #2

- Create a button to change the phrase. It should use the same logic as when you choose the phrase on refresh.

This is a phrase

Refresh

Iteration #3

- Put the input inside a form and add the phrase when the form is submitted.
- You submit a form when pressing the 'enter' key while your cursor is inside the input.
- Which event do you use for that? On what element?

This is a phrase

Refresh
